Dear Sir/Madam:

In response to the request from the Office of Pollution Prevention and Toxics for additional information on our original TSCA 8(e) submission we submit the following information:

The generic names for the chemical components of the test mixture claimed as confidential business information in the original TSCA 8(e) Notice are (in the order in which they were identified): substituted alkyl phosphite, substituted alkyl amine, fatty acid amide, substituted benzotriazole.

Actions taken by Infineum U.S.A. L.P. an Exxon-Shell Joint Venture responsible for manufacturer and for distribution of products containing the chemical components of concern:

Based on the new information described in the original TSCA 8(3) Notice and subsequent supplemental notices, they have reclassified and relabeled all products containing the material and have made appropriate changes to all product Material Safety Data Sheets (MSDS').

They delivered specific customer information packages which explain the change in classification and reemphasize the use of appropriate precautionary measures to keep exposures to a minimum.

Finally, they have surveyed customer experience with products containing this material to ensure that no workplace issues have been overlooked.

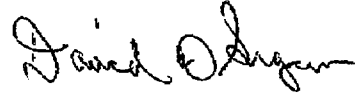

89000000118

A 05

Please contact me if you have any questions with the information supplied above or require further information.

Sincerely,

A handwritten signature in black ink, appearing to read "David D. Sigman". The signature is fluid and cursive, with the first name "David" and last name "Sigman" clearly distinguishable.

David D. Sigman
